

Description of substance classes

Pharmaceutical substances solid and semi solid / liquid

These are the two classes central in the pharmacy. They mainly contain the chemical substances (API's and excipients) with monographs in a pharmacopeia or a similar reference book. Or the manufacturer provides proper specifications.

Drugs

Drugs / Medicinal herbs normally consist of raw whole, chopped or crushed plants, parts of plants, algae, mushrooms or lichens and are usually used dried.

Narcotic substances

Narcotic substances or compoundings are under legal restrictions. In Germany the „Betäubungsmittelgesetz BtMG“ lists these substances in appendix I and II.

TCM herbal extracts

Chinese herbal extracts are herbal decoctions that have been condensed into granular form. For Apo-Ident, there are reference databases of the following manufacturers:

- HerbaSinica
- ChinaMedica
- PhytoComm

HCK® - micronutrients

HCK® – micronutrients are vitamins, minerals, trace elements, bioflavonoids and amino acids which are applied to the herbal excipient guar gum (highly swellable fiber). The excipient causes the micronutrients to be released to the body continually over 4-6 hours. This results in a completely new high-tech product which is distributed in Germany by Unisan GmbH.

BioG MicroTabs

BioG MicroTabs are vital substances in a shape easily to take in. The size of the MicroTabs ensures a better and irritation free transport through the gastrointestinal tract. Thereby vital substances are absorbed better and released faster. In this way, high-quality ingredients may be composed in homogenous mixtures resulting in an innovative, patented modular system which is distributed by Biogenerics Pharma GmbH.
